Freelift Picasso

Straight stairlift

Combines reliability, design and comfort

The Freelift Picasso features an attractive, and very stable, aluminium rail which ensures a smooth and silent ride. Its compact, space-saving design is perfect for narrow staircases, and allows plenty of space for other stair users. Thanks to the stylish shaped rail with no sharp edges, the toothrack is neatly concealed inside the rail for safety and aesthetics. The clever concept makes installation of a Freelift Picasso fast and easy. One engineer can install the Picasso on any straight staircase in less than 1.5 hours!

Ergonomic design

The ergonomic design and soft touch controls ensure optimal user comfort. Various comfort features, like auto swivel function and footrest linkage, are available.

Safety first

The footrest and carriage are fitted with safety edges so that the stairlift will automatically stop if it comes into contact with any obstacle on the stairs.

Automatic folding hinge

To avoid any obstruction at the bottom of the stairs, e.g. where there is a doorway, an automatic hinged rail with safety system is available.
